

1. Download 7zip
2. Open a terminal, build the project as usual
3. Open Manifest.json in the Firefox directory. Search for 'manifest\_version': 2,' in the script. Replace anything below it with

```
"incognito": "spanning",  
  "content_security_policy": "script-src 'self' 'unsafe-eval';  
object-src 'self'",  
  "browser_specific_settings": {  
    "gecko": {  
      "id": "{7f22397f-fb61-47e2-9e4b-4ddd98faa275}"  
    }  
  }  
}
```

Your code should look like

```
"background": {  
  "scripts": ["background.bundle.js"]  
},  
"web_accessible_resources": [  
  "json/*.json"  
],  
"manifest_version": 2,  
"incognito": "spanning",  
"content_security_policy": "script-src 'self' 'unsafe-eval'; object-src 'self'",  
"browser_specific_settings": {  
  "gecko": {  
    "id": "{7f22397f-fb61-47e2-9e4b-4ddd98faa275}"  
  }  
}  
}
```

4. On your terminal, make sure you are under the Firefox directory. Run  
7zz a -tzip myextension.xpi \* -r -mx9
